*The China-Australia Free Trade Agreement* Colin Picker 2017-12-14 This book provides readers with a unique opportunity to learn about one of the new regional trade agreements (RTAs), the China-Australia Free Trade Agreement (ChAFTA), that has been operational since December 2015 and is now at the forefront of the field. This new agreement reflects many of the modern and up-to-date approaches within the international economic legal order that must now exist within a very different environment than that of the late eighties and early nineties, when the World Trade Organization (WTO) was created. The book, therefore, explores many new features that were not present when the WTO or early RTAs were negotiated. It provides insights and lessons about new and important trade issues for the twenty-first century, such as the latest approaches to the regulation of investment, twenty-first century services and the emerging digital/knowledge economy. In addition, this book provides new understandings of the latest RTA approaches of China and Australia. The book's contributors, all foremost experts on their subject matter within this field, explore the inclusion of many traditional trade and investment agreement features in the ChAFTA, showing their continuing relevance in modern contexts.

**Sitting in Judgment** Penny Darbyshire 2011-09-30 The public image of judges has been stuck in a time warp; they are invariably depicted in the media - and derided in public bars up and down the country - as 'privately educated Oxbridge types', usually 'out-of-touch', and more often than not as 'old men'. These and other stereotypes - the judge as a pervert, the judge as a right-wing monster - have dogged the judiciary long since any of them ceased to have any basis in fact. Indeed the limited research that was permitted in the 1960s and 1970s tended to reinforce several of these stereotypes. Moreover, occasional high profile incidents in the courts, elaborated with the help of satirists such as 'Private Eye' and 'Monty Python', have ensured that the 'old white Tory judge' caricature not only survives but has come to be viewed as incontestable. Since the late 1980s the judiciary has changed, largely as a result of the introduction of training and new and more transparent methods of recruitment and appointment. But how much has it changed, and what are the courts like after decades of judicial reform? Given unprecedented access to the whole range of courts - from magistrates' courts to the Supreme Court - Penny Darbyshire spent seven years researching the judges, accompanying them in their daily work, listening to their conversations, observing their handling of cases and the people who come before them, and asking them frank and searching questions about their lives, careers and ambitions. What emerges is without doubt the most revealing and compelling picture of the modern judiciary in England and Wales ever seen. From it we learn that not only do the old stereotypes not hold, but that modern 'baby boomer' judges are more representative of the people they serve and that the reforms are working. But this new book also gives an unvarnished glimpse of the modern courtroom which shows a legal system under stress, lacking resources but facing an ever-increasing caseload. This book will be essential reading for anyone wishing to know about the experience of modern judging, the education, training and professional lives of judges, and the current state of the courts and judiciary in England and Wales.

**Special Advocates in the Adversarial System** John Jackson 2019-08-07 The last twenty years have seen an unprecedented rise in the use of secret courts or 'closed material proceedings' largely brought about in response to the need to protect intelligence sources in the fight against terrorism. This has called into question the commitment of legal systems to long-cherished principles of adversarial justice and due process. Foremost among the measures designed to minimise the prejudice caused to parties who have been excluded from such proceedings has been the use of 'special advocates' who are given access to sensitive national security material and can make representations to the court on behalf of excluded parties. Special advocates are now deployed across a range of administrative, civil and criminal proceedings in many common law jurisdictions including the UK, Canada, New Zealand, Hong Kong and Australia. This book analyses the professional

services special advocates offer across a range of different types of closed proceedings. Drawing on extensive interviews with special advocates and with lawyers and judges who have worked with them, the book examines the manner in which special advocates are appointed and supported, how their position differs from that of ordinary counsel within the adversarial system, and the challenges they face in the work that they do.

Comparisons are made between different special advocate systems and with other models of security-cleared counsel, including that used in the United States, to consider what changes might be made to strengthen their adversarial role in closed proceedings. In making an assessment of the future of special advocacy, the book argues that there is a need to reconceptualise the unique role that special advocates play in the administration of justice.

**Law and Corporate Behaviour** Christopher Hodges 2015-10-22 This book examines the theories and practice of how to control corporate behaviour through legal techniques. The principal theories examined are deterrence, economic rational acting, responsive regulation, and the findings of behavioural psychology. Leading examples of the various approaches are given in order to illustrate the models: private enforcement of law through litigation in the USA, public enforcement of competition law by the European Commission, and the recent reform of policies on public enforcement of regulatory law in the United Kingdom. Noting that behavioural psychology has as yet had only limited application in legal and regulatory theory, the book then analyses various European regulatory structures where behavioural techniques can be seen or could be applied. Sectors examined include financial services, civil aviation, pharmaceuticals, and workplace health & safety. Key findings are that 'enforcement' has to focus on identifying the causes of non-compliance, so as to be able to support improved performance, rather than be based on fear motivating complete compliance. Systems in which reporting is essential for safety only function with a no-blame culture. The book concludes by proposing an holistic model for maximising compliance within large organisations, combining public regulatory and criminal controls with internal corporate systems and external influences by stakeholders, held together by a unified core of ethical principles. Hence, the book proposes a new theory of ethical regulation.
