Public Examinations Examined
Thomas Kellaghan 2019-11-19
High-stakes public examinations exert a dominant

influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and

format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational

assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. "This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide; of the tensions between examinations and learning; and of the technical expertise involved in the creation of valid, reliable, and fair assessments. It reminds us that as "the diploma disease"† takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog.†? Angela W. Little, Professor Emerita, Institute of Education, University College London "This book is very well structured and written and draws on the authors' remarkable global knowledge across countries and histories.

It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings.†? Mark Bray, UNESCO Chair Professor of Comparative Education, University of Hong Kong; and former Director, UNESCO International Institute for Educational Planning "I am sure that Public Examinations Examined, which thoroughly analyzes the practice of public examinations in different countries and makes profound and well-grounded conclusions, will arouse very great interest and will serve to further improve public examinations.†? Victor Bolotov, Distinguished Professor, Higher School of Economics, National Research University, Moscow; member, Russian Academy of Education; and former Deputy Minister of Education, Russian Federation

Social Welfare in Muslim Societies in Africa Holger Weiss 2002 In recent decades there has been an increasing

attempt by Muslim intellectuals to reflect on the provision of social welfare in Muslim societies in Africa. One reason for this is the few, if not non-existent, possibilities of the states to provide for the basic needs of their subjects, a situation that has become painfully evident in most African states not only the Muslim ones. However, public as well as private provision of social welfare is not a new phenomenon in the Muslim world. "This book deals with a most important and previously largely overlooked theme. In the current situation, when economically weak African states have great problems providing social amenities for their people, the welfare activities of Islamic -- and other -- non-governmental organizations have become especially important. This book provides a number of theoretically and, in particular, empirically interesting and valuable discussions on various kinds of Muslim social welfare in a number of African countries." -- David

absenteeism and beyond: instructional time loss and consequences

Helen Abadzi 2007 Studies have shown that learning outcomes are related to the amount of time students

engage in learning tasks. However, visits to schools have revealed that students are often taught for only a fraction of the intended time, particularly in lower-income countries. Losses are due to informal school closures, teacher absenteeism, delays, early departures, and sub-optimal use of time in the classroom. A study was undertaken to develop an efficient methodology for measuring instructional time loss. Thus, instructional time use was measured in sampled schools in Tunisia, Morocco, Ghana, and the Brazilian state of Pernambuco. The percentage of time that students were engaged in learning vis-à-vis government expectations was approximately 39 percent in Ghana, 63 percent in Pernambuco, 71 percent in Morocco, and 78 percent in Tunisia. Instructional time use is a mediator variable that is challenging to measure, so it often escapes scrutiny. Research suggests that merely financing the ingredients of

instruction is not enough to produce learning outcomes; students must also get sufficient time to process the information. The quantity-quality tradeoff that often accompanies large-scale enrollments may be partly due to instructional time restrictions. Time wastage also distorts budgetary outlays and teacher salary rates. To achieve the Millennium Development Goals students must get more of the time that governments, donors, and parents pay for.

Effect of using learning Management System on academic Performance of Students in financial Accounting in Secondary School in Bauchi State

Usman A. Mohammed

2021-02-03 Academic Paper from the year 2021 in the subject Pedagogy - School Pedagogics, , course:

Accounting Technology, language: English, abstract:

This study aimed at finding out the "Effect of Using Learning

Management System on Academic Performance of

Students on Financial

Accounting in Secondary

Schools in Bauchi State". Four specific objectives, four

research questions and four related null hypotheses were

formulated. The research

design adopted was a quasi-experimental design. With a

population of 10,790 secondary schools students II that are

offering FA in Bauchi State.

Purposive sampling technique

was used in the selection of the students where the sample size

was 240 students and also

Purposive sampling technique

was used in selecting the experimental and control groups. Mean and standard deviation were used to answer the four research questions. Independent sample t-test was used to test null hypothesis one and four while paired sample t-test was used in testing the null hypotheses two and three, all null hypotheses were tested at 0.05 level of significance. The findings of the study revealed among others, that there was a significant difference in the achievement of the students of SSS II taught FA using LMS tool compared to those taught using Conventional method. It was concluded that LMS is effective in teaching FA for better students' academic performance in secondary school. Based on this finding, it was recommended among others that teachers should intensify efforts in the use of LMS tool in teaching FA in secondary schools in Bauchi State.

Books, Buildings, and Learning Outcomes Howard White 2004 The Millennium Development Goals aim for universal primary education by 2015 and gender equality in

enrolments at all levels of education. The Education for All (EFA) initiative lays out a strategy for achieving these goals. The Bank's own strategy stresses the school quality aspects of EFA, emphasizing the need to focus on preserving learning outcomes while access to education is expanded. This report assesses the impact to date of the efforts over the past 15 years toward increasing the quantity and quality of basic education in one African country, Ghana.

Cook Anime Diana Ault 2020-09-01 Learn to recreate delicious dishes referenced in over 500 of your favorite anime series with this practical guide to anime food. Japanese animation has beautiful designs, fleshed out characters, and engaging storylines—and it's also overflowing with so many scrumptiously rendered meals. Do you ever watch your favorite anime series and start craving the takoyaki or the warmth of delicious ramen or the fluffy sweetness of mochi? Now, you can make your

cravings a reality with Cook Anime! Join an otaku on her tour through anime food and find out what your favorite characters are savoring and sharing and then learn to make it at home! Including: -Miso Chashu Ramen from Naruto - Rice Porridge from Princess Mononoke -Onigiri from Fruits Basket -Taiyaki from My Hero Academia -Hanami Dango from Clannad -Rice from Haikyuu!! - And many more! Along with each recipe, you will discover facts behind the food, such as history, culture, tips, and more. A perfect gift for foodies and otaku alike, Cook Anime is the all-inclusive guide to making the meals of this Japanese art form.

World Development Report

2018 World Bank Group
2017-10-16 Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR—LEARNING to Realize Education's Promise—is the first ever devoted entirely to education. And the time is

right: education has long been critical to human welfare, but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity, but fulfilling its potential requires better policies—both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those

countries aspire to. And too often these shortcomings are hidden—so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions.

Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.

Values and Valuing in Mathematics Education

Philip Clarkson 2019-04-24

This engaging open access book discusses how a values and valuing perspective can facilitate a more effective mathematics pedagogical experience, and allows readers to explore multiple applications of the values perspective across different education systems. It also clearly shows that teaching mathematics involves not only reasoning and feelings, but also students' interactions with their cultural setting and each other. The book brings together the work of world leaders and new thinkers in mathematics educational research to improve the learning and teaching of mathematics. Addressing themes such as discovering hidden cultural values, a multicultural society and methodological issues in the investigation of values in mathematics, it stimulates readers to consider these topics in cross-cultural ways, and offers suggestions for research and classroom practice. It is a valuable resource for scholars of mathematics education, from

early childhood through to
higher education and an

inspiring read for all
mathematics teachers.
